This manual provides a list of ICD-O-3 morphology codes that are used in UK Biobank.

Introduction

The histology and behaviour codes for neoplasms are represented as separate data-fields in the data Showcase for UK Biobank, i.e. 4-digit histology code data-field and 1-digit behaviour data-field. Histology is coded according to the International Classification of Diseases for Oncology, 3rd edition (ICD-O). In the Data Showcase, these codes are presented in broad categories in a tree-like structure:

- (8000–8009) Not otherwise specified
- (8010–8790) Epithelial
- (8800–9370) Connective tissue
- (9380–9589) Nervous system
- (9590–9999) Hematologic (Leukemias, Lymphomas and related disorders)

The behaviour data-field relates to the 5th digit (i.e. after the slash) and is coded as follows:

- /0 Benign
- /1 Uncertain whether benign or malignant
 - Borderline malignancy
 - Low malignant potential
- /2 Carcinoma in situ
 - Intraepithelial
 - Noninfiltrating
 - Noninvasive
- /3 Malignant, primary site
- /6 Malignant, metastatic site
 - Malignant, secondary site
- /9 Malignant, uncertain whether primary or metastatic site.

This documentation presents the tumour morphology (i.e. histology and cancer behaviour combined) as five-digit codes in ICD10-O-3, ranging from M-8000/0 to M-9993/3. The main references for the data listed in this manual were the ICD-O-3 documents from Surveillance Epidemiology and End Results (SEER), World Health Organisation (WHO) and International Association of Cancer Registries (IACR).
