**Land use density**

**Description:** Land use density was derived as a part of the morphometric analysis of the built environment that was conducted by the Cochrane Institute of Primary Care and Public Health, Cardiff University.

Density was measured for different land use classes within 0.5, 1.0, 1.5, 2.0 kilometre street network catchments of UK Biobank respondent's dwelling as well as within the lower super output areas (LSOA) in which they resided. The land use classes were defined in 217 different categories (such as commercial, residential, prison, law court, brewery, recycling plant) at 4 different levels of detail. Each column in the file represents one land use category. The header file defines names and labels (i.e. land use classes) for each column.

For more information and detailed description of the methodology and variables please refer to the 'MORPHOMETRIC ANALYSIS OF THE BUILT ENVIRONMENT IN UK BIOBANK: DATA ANALYSES AND SPECIFICATION MANUAL' in the 'Additional Resources' tab.
